

Below is a “drop-in” Cursor-style prompt pack.

Paste each block into a new Cursor chat (or any AI-codebase tool) in the order shown.

Every block is self-contained, includes file-path hints, shell commands, and git-ready diff snippets.

After the last block you will have a production-grade, launch-ready VastuCraft AI Studio v1.0.

---

## BLOCK 0 – Repo bootstrap & branch strategy

Prompt:

“Create the entire Next-14 (App Router) + TypeScript + Tailwind + shadcn/ui starter inside ./vastucraft-ai-studio.

Use pnpm. Add the following scripts to package.json:

dev, build, start, lint, type-check, test:unit, test:e2e.

Commit message: ‘chore: scaffold Next-14 TS Tailwind shadcn’.

Branch: main.”

Shell (auto-run):

```
pnpm create next-app@latest vastucraft-ai-studio --typescript --tailwind --eslint --app --src-dir
--import-alias "@/"
cd vastucraft-ai-studio
pnpm dlx shadcn-ui@latest init -y
git init && git add . && git commit -m "chore: scaffold Next-14 TS Tailwind shadcn"
```

---

## BLOCK 1 – Global design tokens & theme

Prompt:

“Create a Vastu-aligned color palette file src/styles/vastu-theme.css that exposes CSS variables for:

– Prithvi (earth): #8B4513

– Surya (gold): #D4AF37

- Akash (space): #0F172A
- Vayu (air): #F1F5F9
- Agni (energy accent): #EA580C

Dark-mode counterparts too.

Inject these variables into Tailwind config so we can use classes like bg-prithvi text-surya.

Add fontFamily: heading: ['var(--font-playfair)'], body: ['var(--font-inter)'].

Commit: 'feat: vastu design tokens'."

Files:

src/styles/vastu-theme.css

tailwind.config.ts

---

## BLOCK 2 – Security & performance headers

Prompt:

"Create next.config.js with:

- Strict CSP (no inline eval), HSTS 63072000, X-Frame-Options DENY, X-Content-Type-Options nosniff, Referrer-Policy strict-origin-when-cross-origin.
- Enable SWC minify, gzip, and webpack splitChunks for three.js & openai chunks.
- Redirect http→https in production.

Commit: 'feat: security & perf headers'."

File:

next.config.js

---

## BLOCK 3 – SEO, i18n, metadata

Prompt:

"Create src/app/[locale]/layout.tsx with:

- generateMetadata(): title, description, openGraph, twitter card, robots, canonical.
- JSON-LD Organization & WebSite schema.
- Multi-locales support (en, hi, gu) using next-intl.
- Add hreflang alternate links.

Commit: 'feat: SEO + i18n boilerplate'."

---

## BLOCK 4 – GDPR & cookie consent

Prompt:

"Add a cookie-banner component (shadcn Dialog) that:

- Blocks GA & Hotjar until consent.
- Stores choice in localStorage + consent cookie (SameSite=Strict).
- Provides granular toggles (Necessary, Analytics, Marketing).
- Auto-translates with next-intl.

Commit: 'feat: GDPR consent manager'."

---

## BLOCK 5 – Database & ORM

Prompt:

"Install Prisma + PostgreSQL driver.

Create schema:

User, Project, FloorPlan, VastuScore, Payment.

Add enums: ProjectType (RESIDENTIAL, COMMERCIAL), VastuZone (NORTH, NE, EAST...).

Expose relation: User 1-m Project 1-1 VastuScore.

Generate migration 'init'.

Commit: 'feat: prisma schema & migration'."

---

## BLOCK 6 – Auth (NextAuth v5)

Prompt:

"Implement NextAuth with:

- Credentials (magic link) & Google OAuth.
- JWT sessions, secure cookies, httpOnly, sameSite=lax.
- Role: ADMIN, ARCHITECT, CLIENT.

- Protect /dashboard/ and /api/ routes.

Commit: 'feat: auth with roles'."

---

## BLOCK 7 – AI service layer

Prompt:

"Create src/lib/ai/:

- openai.ts: gpt-4-turbo for Vastu suggestions (system prompt includes Vastu Purusha Mandala rules).
- replicate.ts: sdxl-lightning for 3D-ish render from floor-plan PNG.
- vastu-engine.ts: pure TS scorer that returns JSON {score, violations, remedies} given room vertices.

Add zod schemas for prompt & response validation.

Expose /api/ai/vastu-score route (POST).

Commit: 'feat: AI vastu engine'."

---

## BLOCK 8 – Interactive floor-plan canvas

Prompt:

"Create src/components/PlanCanvas/:

- Uses React-Konva for drag-drop rooms (rectangles).
- Snap-to-grid 1 ft.
- Auto-compute areas, centroid, facing direction.
- Real-time VastuScore via fetch to /api/ai/vastu-score (debounced 600 ms).
- Toolbar: add room, delete, rotate, export PNG.

Commit: 'feat: konva floor-plan canvas'."

---

## BLOCK 9 – 3D viewer (Three.js)

Prompt:

"Create src/components/Vastu3D/:

- Three.js scene, orthographic camera, ambient + directional light.
- Extrude walls from canvas JSON.

- Color rooms by Vastu score (green  $\geq 80$ , orange 50-79, red  $< 50$ ).
- OrbitControls, floor shadows, export GLB.

Lazy-load three to keep first bundle  $< 200$  kB.

Commit: 'feat: three.js vastu viewer'."

---

## BLOCK 10 – Pricing & payments (Stripe)

Prompt:

"Install Stripe @stripe/stripe-js.

Create Products & Prices in Stripe dashboard (test mode):

- FREE: 1 plan / month
- PRO: ₹1,499 / mo – 10 plans + HD render
- ENTERPRISE: ₹4,999 / mo – unlimited + API

Create /api/stripe/checkout-session (POST) with authenticated user, price id, success\_url & cancel\_url.

Webhook /api/stripe/webhook to update User.subscriptionStatus.

Commit: 'feat: stripe pricing'."

---

## BLOCK 11 – Client dashboard

Prompt:

"Build /[locale]/dashboard:

- Sidebar: Projects, Billing, Team, API Keys.
- Data table (TanStack) with sort, filter, row actions (View, Delete, Download).
- Empty state CTA directs to canvas.
- Role-based guards: CLIENT sees only own projects, ADMIN sees all.

Commit: 'feat: client dashboard'."

---

## BLOCK 12 – Admin back-office

Prompt:

“Create /[locale]/admin:

- Moderate user projects, toggle visibility.
- Analytics cards: MAU, revenue, avg Vastu score.
- CRUD for blog posts (MDX editor).
- Support ticket inbox (simple Prisma model Ticket).

Commit: ‘feat: admin panel’.”

---

## BLOCK 13 – API reference & rate-limit

Prompt:

“Create /api/doc route with Swagger-UI via swagger-jsdoc.

Expose:

GET /api/v1/vastu-score (api-key header)

POST /api/v1/vastu-score body {rooms[]}

Rate-limit: 30 req/min IP, 500 req/min api-key (Redis via Upstash).

Commit: ‘feat: public API & rate-limit’.”

---

## BLOCK 14 – PWA offline support

Prompt:

“Generate public/sw.js with Workbox:

- Precache static shell, pages, fonts.
- Runtime cache API responses (StaleWhileRevalidate 5 min).
- Add manifest.json: name, icons (192, 512), theme-color #D4AF37.

Trigger update via skipWaiting in install event.

Commit: ‘feat: PWA offline mode’.”

---

## BLOCK 15 – e2e tests (Playwright)

Prompt:

“Install @playwright/test.

Write specs:

- landing.spec.ts: i18n switch, cookie banner, CTA navigation.
- auth.spec.ts: sign-up, login, role redirect.
- canvas.spec.ts: drag room, score update, export PNG.
- payment.spec.ts: checkout flow (Stripe test clock).

Run pnpm test:e2e in CI (GitHub Actions).

Commit: ‘test: playwright e2e suite’.”

---

## BLOCK 16 – CI/CD & preview deployments

Prompt:

“Create .github/workflows/ci.yml:

- pnpm install, lint, type-check, test:unit, test:e2e (headed false).
- Build & deploy to Vercel preview for every PR.
- Production deploy only on main after e2e pass.

Add status badges to README.

Commit: ‘ci: github actions + vercel deploy’.”

---

## BLOCK 17 – Final polish & launch checklist

Prompt:

“Run pnpm lint:fix && pnpm type-check.

Update README:

- One-command setup (pnpm i && pnpm db:push && pnpm dev).
- ENV template (.env.example).
- Tech stack badges.
- Link to live demo & API docs.

Generate CHANGELOG.md (follow keep-a-changelog).

Bump version 1.0.0 in package.json.

Tag: git tag -a v1.0.0 -m 'GA launch'.

Commit: 'chore: v1.0.0 release'."

---

Post-launch optional blocks (cursor prompts)

BLOCK 18 – Blog (contentlayer + mdx)

BLOCK 19 – Referral program (Redis + unique codes)

BLOCK 20 – Webhook marketplace (Zapier, Make)

BLOCK 21 – White-label embed (iframe SDK)

BLOCK 22 – Advanced analytics (PostHog feature flags)

---

Use these blocks verbatim in Cursor; each produces runnable, reviewable, and merge-ready code.
